Why in the world would the lobbyists for the different radio stations be opposed to the weather and road condition reports? Well I'll tell you, the radio stations don't always offer these things on their stations and would like to stop anyone else from doing so also. These services offered by XM are a real blessing to truck drivers like myself and others who commute to these larger cities on a regular basis. The local radio stations aren't always able to be received on your in dash system, or plain just don't offer up to date weather and traffic reports because the broadcasts are computer generated. Please see to it that XM radio stays intact like it is now, the other radio stations just don't offer these valuable services.
Thanks
